# STRUCTUREDGROUND™ Auxiliary Cable Bracket and Jumper

## specifications

The auxiliary cable bracket shall provide a discrete channel for grounding conductors that require separation from other cables, and it shall be UL Listed and CSA Certified for bonding ladder rack sections together. Paint piercing teeth shall be incorporated into the bracket to automatically remove paint and create a bond for high electrical performance. The auxiliary cable bracket shall be approved to hold up to four conductors in sizes up to 750 kcmil and shall work with all readily available ladder racks. There shall be a grounding jumper that connects to the auxiliary cable brackets to bond the ladder rack sections together and create a grounding path. The jumper shall be factory terminated on both ends with copper compression lugs that meet NEBS Level 3.

## technical information

<b>Performance level:</b>	UL Listed and CSA Certified
	Holds up to four conductors in sizes up to 750 kcmil
	Bonds all 1 1/2" (38.1mm) and 2" (50.8mm) ladder rack rails
<b>Packaging:</b>	Auxiliary cable bracket is supplied with one mounting screw
	Auxiliary cable bracket jumpers are supplied with four mounting screws and antioxidant
<b>Materials:</b>	Bracket – Plated steel
	Jumpers – Class B, copper code conductors with green and yellow insulation

## key features and benefits

<b>Paint piercing teeth</b>	Provide electrical continuity to ladder rack sections while minimizing debris
<b>UL Listed and CSA Certified</b>	Complies with all industry requirements to ensure a high level of safety and reliability
<b>Factory terminated jumpers</b>	Speed and simplify installation and ensure a reliable connection when used with auxiliary cable bracket
<b>Front and back mounting screw options</b>	Allows easy installation and visual inspection

## applications

PANDUIT® STRUCTUREDGROUND™ Auxiliary Cable Bracket and Jumper bond ladder rack sections together without drilling holes in the ladder rack. The bracket supports grounding conductors in the telecommunications room, allowing separation of grounding conductors from other cables on the ladder rack. The mounting screw can be installed on the front or back of the bracket to allow easy mounting

on the ladder rack. When installed, the paint piercing teeth on the bracket remove paint from the ladder rack sections to create an electrical bond. This saves cost and labor as there is no need to manually remove paint. The auxiliary cable bracket jumpers are factory terminated on both ends for a bolt-on solution; connecting ladder rack sections to provide equipotential grounding.
